

VDO KIMAX ON-BOARD WEIGHING SYSTEMS FOR TRUCKS & TRAILERS

DOES YOUR RIG MEASURE UP?

With tough fines for overloading & fierce competition, efficiency is the key to business profitability in road transport. The cost-effective solution for on-board weighing systems is KIMAX - a classic case of technology working for you!

KIMAX is a retro-fit axle load indicator designed for both trucks & trailers fitted with air suspensions. It is simple to install, easy to operate & extremely cost effective. Versions are available for truck or trailer, as well as 1 or 2 sensor options per axle.

Apart from the obvious advantages of an on-board weighing system, operator benefits include profit improvement through load maximisation and avoidance of fines for overloading (which can exceed \$1000). The payback on KIMAX as a business & operational tool is superb!

OPTION A: TRUCK OR TRAILER

TRUCK CAB VERSION

Designed for use in the driver's cab. This version comes with a holder for simple attachment to the dashboard.

TRAILER VERSION

Designed for use with trailers & semi-trailers. This features a more sturdy design with the sensor installed in a waterproof stainless steel casing.

OPTION B: 1 OR 2 SENSORS

ONE SENSOR VERSION

The choice is yours: KIMAX is available with either 1 or 2 sensors. The 1 sensor version takes a measurement from only one of the two ends of the axle.

TWO SENSOR VERSION

2 Sensors allow the operator to have the figure calculated from both ends of the axle. This offers additional accuracy if the vehicle is tilted to one side.

PART NO.	Description
X10-732-002-001	2 Sensor Truck Unit
X10-732-002-002	2 Sensor Trailer Unit
X10-732-002-003	1 Sensor Truck Unit
