

PROTECT YOUR UTE OR 4WD

WITH SAKURA'S PREMIUM FUEL WATER SEPARATOR KIT

Modern common rail diesel injection (CRDI) engines in our favourite Ute's and 4WD's require very clean and dry fuel to avoid costly damage. This is because of the super high pressure of the fuel in the pumps and injectors, any contaminate either dirt or water can cause catastrophic component damage.

Dirt and other contaminates can enter via the refuelling process and is often out of our control.

While water can be transferred, fuel tanks create their own water through condensation, this is exacerbated by the CRDI engine returning warmed fuel back to the tank. Vehicle/engine manufacturers are unlikely to warrant a vehicle affected by contaminated fuel.

Many of these vehicles in New Zealand should have an extra layer of protection, for this reason Sakura have produced a kit which includes a high-quality fuel water separator filter with priming pump, and everything needed to fit to your vehicle.

Included: Mounting bracket, hose, fittings, and replacement filter.

Kits to suit:

- Holden Colorado
- Ford Ranger
- Mazda BT50
- Isuzu D-Max
- Isuzu MU-X
- Toyota Hilux
- Toyota Prado
- Toyota Landcruiser
- Mitsubishi Triton
- Volkswagen Amarok
- Nissan Navara

CHECK WITH YOUR LOCAL TWL WHAT IS THE CORRECT KIT FOR YOUR VEHICLE. AVAILABLE BY REQUEST.
